CORRUGATED CARDBOARD BULKHEADS

Providing a cost effective containment wall used to restrain dry flowable bulk commodities such as peas, lentils, soy beans, malt, barley and other bulk grains. Norseman Corrugated Bulkheads eliminate the contamination concerns and special disposal needs of traditional wood bulkheads. Our Bulkheads are lightweight, easy to install can be used with conveyor, auger, gravity and tilt loading equipment.

- Lightweight, easily installed by one person.
- Double wall corrugated cardboard.
- Scored flaps for easy installation.
- All corrugated bulkheads are pre-punched to position handles and bracing tie placements.
- Supplied with or without cable ties.
- Can be used in 20’ or 40’ ocean containers. Custom bulkheads for 53’ intermodal ocean containers and trailers available upon request.
- To initiate product discharge, simply cut the bulkhead for unloading.
- Used in conjunction with the Norseman Bracing System.

NORSEMAN BRACING SYSTEM (NBS)

The Norseman Bracing System (NBS) is 100% recyclable with no special disposal conditions. It eliminates the need for ties to secure the brace to the bulkhead as the end/bracing cap friction fits into the U-channel of the container, self-supporting the wood brace (ties may be required for tilt loading).

- Patented engineered bracing system to restrain cargo against longitudinal movement within a container. Patent # 8459916.
- Easy, one person installation
- Can be used in conjunction with the Norseman Protector Liner.
- System includes corrugated bulkhead, wood bracing and restraining caps.
- Can be used for containerized FIBC or bagged products requiring bracing at the door end.
- Wood bracing provides a viable and cost effective alternative to steel bars.
